## PROJECTS

### CLASSICS LIST

A full-stack web application that enables book enthusiasts to share reviews, engage with other users, and manage their profiles for seamless interaction within the community.

- Constructed a React frontend and Ruby on Rails backend
- Implemented a user profile management system for easy access, editing, and deletion of user reviews
- Incorporated dynamic user ratings to update overall book ratings in real-time
- Ensured secure user authentication and authorization with Bcrypt integration

### WANDER

A full-stack web application that allows users to browse, share, and engage with various travel experiences, providing valuable insights for future travelers and enhancing trip planning.

- Developed a React frontend and Ruby on Rails backend
- Created an intuitive user interface for seamless browsing, commenting, sharing, and reviewing of travel experiences
- Enabled users to like and comment on unique travel experiences to foster engagement and interaction
